

**SOUTH BAY
ASSOCIATION OF REALTORS
LECTURE HALL UPGRADE**

The South Bay Association of Realtors (SBAR) is located in Redondo Beach California. Their building contains a 2500 Square foot lecture hall used for continuing education courses and seminars. SBAR contracted Digital Installers to upgrade the hall's technology. The scope of the project included system design and installation of video projection, video recording, speakers, centralized control, and multi-color stage lighting.

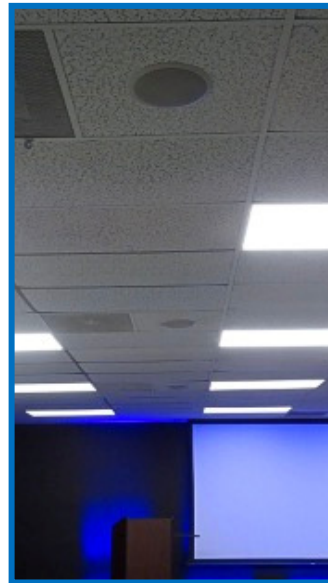

PROJECT ELEMENTS

The video elements of this project entailed the installation of a ceiling mounted projector, a 120" motorized projector screen for presentations. A fixed stage camera was installed in ceiling and a custom backlit record button was installed on wall for simple on/off operation. The audio element included the installation of eight in-ceiling speakers for even sound coverage throughout the space. The lighting element included four "RGB" light panels installed on the stage for the client to create fun and unique moods during events. Cables for AV were ran to a centralized control system and to an existing podium for convenient control. All components of the system are controllable via a ten inch touch panel located at the back of the room. Users can also control all components remotely via smart phone.
