

JOBFILEZ INC.

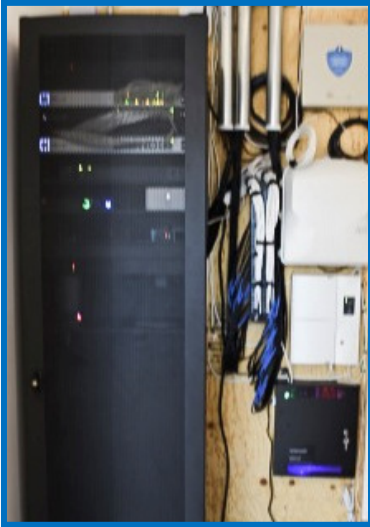

TENANT IMPROVMENT

Jobfilez is a software company headquartered in Long Beach California. Upon purchasing a commercial space in a new light industry development, Jobfilez contracted Digital Installers to improve the space. The scope of the project included system design and installation of TVs, sound, wired & wireless network, alarm, and access control.

PROJECT ELEMENTS

Networking & WiFi

All wires were ran to the headend room where we installed a rack containing the network and audio/video equipment. Additionally we installed the alarm panel and access control panel.

TV Installation

We installed a total of six TVs ranging from 55" to 85" throughout the space. During the pre-wire phase we installed network keystones behind each TV location.

Speakers

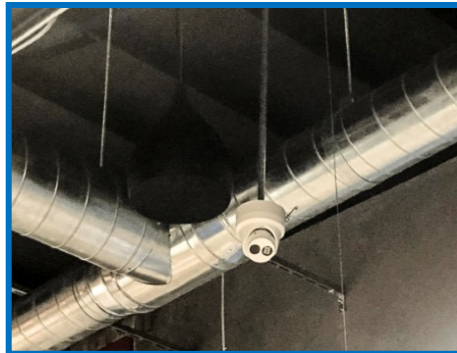

To compliment the open architecture we installed a total of four pendant style speakers for sound throughout the space.

Access Control System

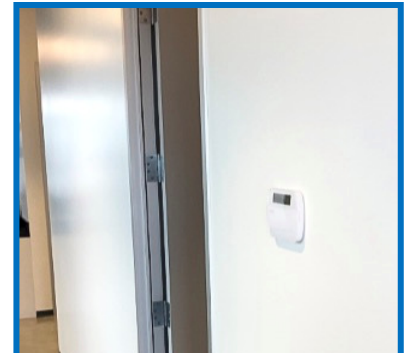

Utilizing state of the art Bluetooth reader technology we installed a 1 door control system. Parts included electrified door latch, reader, and control panel.

Surveillance Cameras

We installed a four camera system. Three of the cameras were suspended from the ceiling and one camera mounted on-wall for optimal viewing angles.

Alarm

The alarm installation consisted of two wireless door contacts, two wireless motion detectors, alarm panel, and one keypad.
