

SMITH RESIDENCE

OUTDOOR AUDIO & SURVEILLANCE

In 2018 Mr. Smith built a custom smart home in Scottsdale Arizona. He has been a loyal customer of Digital Installers for over 15 years and retained them once again for this special outdoor project. The scope included system design and installation of outdoor sound, surveillance cameras, network, and a control system.

PROJECT ELEMENTS

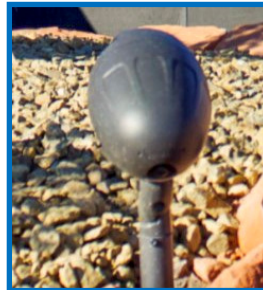

Sound

The Smith residence has an amazing outdoor living space designed to entertain. With two covered patios, full outdoor kitchen, pool, Bocce Ball court, and accented with a variety of fire features, the space was ready to be engulfed in sound. Due to the expanse of the yard, Digital Installers utilized a variety of speakers to provide great sound throughout. They installed twelve landscape speakers along the perimeter of the yard to project sound inward. For the open areas located furthest from the perimeter they installed two 360 degree speakers projecting sound equally in all directions. In the covered patios they installed 4 in-ceiling speakers. To provide great bass digital installers installed two underground subwoofers, one near the pool, and one near the Bocce Ball court. The sound system is easily controlled via the home's automation system.

Surveillance

Mr. Smith wanted the added convenience and security of a camera system to watch over his property. Digital Installers designed and installed a thirteen camera system with a variety of camera lenses to capture all areas of potential concern. The cameras are viewable via mobile device.
